 SaveSys — Savings Management System

- A multi-tier savings, loans, and fines management platform.
- **No database server needed** — all data is stored in `data/db.json`
 - **Just Node.js required** — install it and you're ready

 Quick Start (VSCode)

Step 1 — Install Node.js

Download and install from <https://nodejs.org> (v18 or higher).

Step 2 — Open project in VSCode

File → Open Folder → select this project folder

Open the terminal: **Terminal** → **New Terminal** (Ctrl + `)

Step 3 — First-time setup (run ONCE)

```
bash setup.sh
```

Step 4 — Start the app

```
bash run.sh
```

Then open <http://localhost:3000> in your browser.

Shell Scripts (all your tools)

Script	What it does
bash setup.sh	First-time setup — installs dependencies
bash run.sh	Start the app (use this every day)
bash update.sh	Check code for errors after you edit files
bash update.sh --build	Full production build check
bash backup.sh	Save a timestamped copy of the database
bash reset-data.sh	Wipe all data and start fresh

First-Time Use

1. Run `bash run.sh` → open <http://localhost:3000>
2. Click **Register admin** → create the **1st account** → becomes **V-Super Admin**
3. Create 2 more → become **Super Admins**
4. Registration **locks automatically** after 3 accounts

Account Roles

Role	Dashboard Colour	What they can do
V-Super Admin (1 only)	■ Black	Full system owner. Create/edit/suspend Group Admins. Approve password resets.
Super Admin (2 max)	■ Gray	View-only. See all groups, download summaries. Cannot edit anything.
Group Admin (many)	■ Indigo	Manage 1 group. Add members, record savings, fine members, approve loans.
Member	■ Green	View own savings/fines/loans. Submit weekly savings. Apply for loans.

Core Features

Savings

- Group Admin records savings for members
- **Members can submit their own weekly saving** (KSh 200–5,000)
- Auto-total shown on all dashboards

Loans

- **Cash loans** → 10% flat interest added
- **Item loans** → fixed item price, **no interest**
- Member applies → Group Admin approves/rejects → V-Super + Super Admins notified
- Only 1 active loan per member at a time
- Due date picker (past days blocked)

Fines

- **System auto-fines:** 1% of loan amount per day if past due date
- **Manual fine:** Group Admin can fine any member (e.g. for late login)
- Completely separate ledger from savings

Reports & Downloads

- Group Admin: download members report (CSV)
- Super Admin / V-Super Admin: download all group summaries (CSV)

Project Structure

```
savesys/
├── setup.sh      ← Run once to set up
├── run.sh        ← Run every day to start
├── update.sh     ← Check errors after editing code
├── backup.sh     ← Backup the database
├── reset-data.sh ← Wipe all data and start fresh
├── data/
│   └── db.json  ← All your data lives here (auto-created)
├── src/
│   ├── app/     ← Pages and API routes
│   │   ├── login/
│   │   ├── register/
│   │   ├── dashboard/
│   │   └── api/
│   │       ├── auth/    ← login, register, logout, reset
│   │       ├── admin/   ← overview, users, summary
│   │       ├── group/   ← members, savings, fines, loans, items
│   │       └── member/  ← dashboard, savings, loans
│   ├── components/ ← Dashboard UIs for each role
│   │   ├── VSuperDashboard.tsx
│   │   ├── SuperDashboard.tsx
│   │   ├── GroupAdminDashboard.tsx
│   │   └── MemberDashboard.tsx
│   ├── db/
│   │   └── store.ts ← JavaScript database (no SQL needed)
│   └── lib/
│       ├── auth.ts    ← Login / sessions / passwords
│       ├── group.ts   ← Group admin helper
│       ├── overview.ts ← System overview builder
│       └── penalty.ts ← Auto-penalty engine
└── package.json
```

Editing the Code in VSCode

The dev server **hot-reloads automatically** — just save the file and refresh the browser.

After editing a file:

```
bash update.sh
```

This checks for TypeScript errors. If it passes, your changes are live.

After editing multiple files or a big change:

```
bash update.sh --build
```

This runs a full production build check.

Common edit locations:

What to change	File to edit
Login / Register pages	src/app/login/page.tsx src/app/register/page.tsx
V-Super Admin dashboard	src/components/VSuperDashboard.tsx
Super Admin dashboard	src/components/SuperDashboard.tsx
Group Admin dashboard	src/components/GroupAdminDashboard.tsx
Member dashboard	src/components/MemberDashboard.tsx
Interest rate (cash loans)	src/app/api/member/loans/route.ts → CASH_INTEREST_RATE
Weekly savings limits	src/app/api/member/savings/route.ts → MIN_SAVING / MAX_SAVING
Penalty rate	src/lib/penalty.ts → 0.01 (1%/day)
Database structure	src/db/store.ts

 Database

- **Location:** data/db.json
- **Auto-created** the first time you register an account
- **No SQL, no PostgreSQL** — pure JavaScript JSON file
- To view/edit raw data, open data/db.json in VSCode

Backup before big changes:

```
bash backup.sh
```

Backups are saved to data/backups/

Restore a backup:

```
cp data/backups/db_backup_2025-01-01_12-00-00.json data/db.json
```

**Reset everything:**

```
bash reset-data.sh
```

 **Troubleshooting**

Problem	Fix
command not found: bash	On Windows use Git Bash or WSL
node: command not found	Install Node.js from nodejs.org
Port 3000 busy	Edit run.sh → change npm run dev to npm run dev -- -p 3001
Login not working	Check data/db.json exists and has accounts
Changes not showing	Make sure bash run.sh is still running; hard-refresh browser (Ctrl+Shift+R)
TypeScript error	Run bash update.sh and fix the error shown

Problem	Fix
Want fresh start	Run <code>bash backup.sh</code> then <code>bash reset-data.sh</code>

Windows Users

If `bash run.sh` doesn't work, use one of these:

Option A — Git Bash (recommended):

README

- In VSCode: `Terminal` → `Select Default Profile` → `Git Bash`
- Then `bash run.sh` works normally

Option B — Use npm directly:

```
npm install
npm run dev
```
